FRIDAY, JULY 17, 1903.

SOCIETY MEETINGS.

MASONIC—Special communication of Macon lodge No. 1000, this Friday evening at 7:30 o'clock for work in the third degree. A. Buckingham, W. M., W. L. Hamner, Sec.

MATTERS OF FACT.

Nine o'clock washing tea at Irwin's pharmacy.

Fast color American chaffies only 3 1/2c a yard at the great clearing sale of Linn & Scruggs Dry Goods and Carpet company.

Prescriptions are carefully prepared at Irwin's pharmacy.

When you want your shoes repaired go and see John McAllister in Perle building.

Leads Tennis jackets and Blouses very cheap at the great clearing sale of Linn & Scruggs Dry Goods and Carpet company.

John McAllister will repair your shoes on short notice. Give him a trial. Tabernacle building.

Delicious, cooling and refreshing summer drinks at Irwin's drug store.

Best Indigo Blue prints 5c a yard. Heavy yard wide sheeting 4c a yard at the great clearing sale of Linn & Scruggs Dry Goods and Carpet company.

You can get any kind of a vehicle you want of the Spencer & Lehman Co.

A great reduction sale of trimmed millinery at cost this and next week at the new millinery store, in Casner block, opposite the postoffice.

Fast Black dragon organdies, French mousselines, wool challies and all summer dress goods greatly reduced in price at the great clearing sale of Linn & Scruggs Dry Goods and Carpet company.

Come and see our buggies, surreys, phaetons, spring wagons and road carts—the best made and cheapest in town.

THE SPENCER & LEHMAN CO., South Main and Wood streets.

Great Bargains in summer underwear, children's ribbed vests 5c at the great clearing sale of Linn & Scruggs Dry Goods and Carpet company.

Always Ahead.

You can buy ladies' dongola Oxford, patent tip, machine sewed, sole leather, counter flexible inner sole. A good one made for service and durability. The most popular Oxford for hard service as the great many of ladies who are wearing them will attest. All sizes, 2 1/2 to 7. You can get them at \$1 per pair at the Ferriss & Lapham Shoe store, 148 East Main street.

Buggies! Buggies! Buggies! Do you want a buggy? Do you want a stylish wagon? If you do we have a large stock of all kinds of vehicles and will sell you at bottom prices. Come in and see our display.

THE SPENCER & LEHMAN CO.

Blackberries

You can get plenty of nice blackberries at May & Churchman's. Buy while they are cheap.

A Good Housekeeper

will appreciate the advantages of the "Victoria" sweeper. They don't touch the carpet and for that reason do not wear the nap off of moquettes, Axminsters and Brussels. See them at the Lytle & Eckels Hardware company.

Rice Out Spring.

You should call for the Rice Out spring when you buy a buggy. We guarantee them to be the best.

THE SPENCER & LEHMAN CO.

Fruit Jars.

May & Churchman still have plenty of Mason's fruit jars. While the demand has been heavy, they had a large stock and will be able to fill all orders.

Surreys

We want you to come and see our stock and learn our prices when you want a survey.

THE SPENCER & LEHMAN CO.

Horse for Sale.

Fine bay gelding, sound, 4 years old, afraid of nothing, good traveler. Price \$175. Lock box 414, Taylorville, Ill.

Prescott's Music House

is the place for you to try if you want anything in that line.

Macon

Macon and Macon cross ball bats to-day. Mr. Morgan has two fine bats for our fair.

J. R. Hight is rusticated in the country.

Ed Hight and wife were in Decatur Thursday.

John Myers of Blue Mound was in Macon last Tuesday.

Mr. Valmer lost a very fine mare last Tuesday night.

William Morgan of Morgansville was in town last Monday.

Hight and Son's patent lumber unloader works like a charm.

Lew Webb transacted business in Blue-Mound last Tuesday.

H. H. Armstrong transacted business in Elwin Thursday.

We are to have the noted Jingles next Monday night at the Tab.

THE CITY CONCEDES

That Two Eldorado Property Owners Were Unjustly Taxed.

The Eldorado street widening case seems to be settled. Now it appears that the city will pay the big part of the cost, and go ahead and make the improvement.

The case came up in the county court yesterday, and the city attorney presented an agreement that was satisfactory to the property owners. The assessment roll was confirmed and the court ordered the assessment made.

The commissioners in assessing the benefits, decided that the city should pay \$1,700, that Mrs. Bishop should pay \$470.50, and that Mrs. Shall should pay \$885.

The two property owners, through their attorney, W. C. Outten, announced that they would contest the assessment, and would not pay a cent. They claimed that they had already paid for all the benefits they got.

The city seems to have taken the same view of the matter, for it consented to knock off \$400 in the case of Mrs. Bishop, and \$900 in the case of Mrs. Shall. Thinking it cheaper to pay the balance than make the fight, the two ladies agreed to the reduction.

The city will have to pay the money assessed to them. That will make \$2,370 that the city will have to pay. The report of the first commissioners was not accepted, because they assessed \$2,300 to the city. Now it seems the authorities have concluded that the city cannot widen the street at much less cost to the city than that.

As it is, the city gets the best of it. Mrs. Bishop and her friends feel that she loses just \$1,000 on the transaction. She is that much poorer.

There is another phase of the matter. The city tore up the sidewalk adjoining Mrs. Bishop's property on Eldorado street, and left her without any sidewalk. She had just paid \$100 for that work, and she at once began suit against the city, with good prospects of getting judgment in the settlement just made, she agrees to drop that suit. The fact of that suit may have had something to do with making the city offer to knock off the \$400 assessed to her.

Talks of Mad Dogs

Our Northeast Decatur correspondent says the dog killed by Mr. Lewis on East Edmond street a day or two ago was a St. Bernard dog. The dog was a large white bull and was vicious. Mr. Lewis' wife noticed during the day that there was something wrong with the dog and spoke to her husband about it when he came home in the evening. Nothing more was thought of it until Mr. Lewis went to lock the chicken house, when the dog came for him and it was all he could do to keep the dog away until he could get in the house. The dog raved and ran all around the house a number of times, snapping at anything in his way, even at the fence and came near getting Mr. Lewis while he was trying to shoot him through the window. Mr. Ballard the Wabash detective was called, and both men shot the dog at least 20 times. Finally a shot gun was brought into action. The dog ran under the porch and as Mr. Lewis started in from the outside of the yard with the gun, the dog came at him and jumped almost in his face. The charge from the gun took effect in the animal's breast, which ended one of the severest fights with a mad dog on record in that part of town. People should keep a close watch on their dogs. It is thought this one bit was thought of.

Neighbors Don't Agree

August Linstrom and Simon Schaller are neighbors living southwest of the city. They don't get along very well, it seems. Yesterday Simon swore out two state warrants against August, one charging him with cruelty to animals, in beating an old man, and the other charging him with breaking two window lights in a building owned by Simon. August charged Simon with walking over a wheat field that he had been instructed to keep off. Justice Hamner heard the three cases yesterday and dismissed the two against August. Simon he fined \$1, because there was no doubt that he walked on the wheatfield, though he did it no damage.

Rates for the Picnic

The committee on transportation for the Woodmen's picnic on Aug. 5 has received notice of favorable railroad rates. The fare will be one fare for the round trip from points in Sangamon, DeWitt, McLean, Patt, Shelby, Douglas, Champaign, Christian and Macon counties. The tickets will be on sale Aug. 5 and 6, good returning up to Aug. 7. The committee is pleased with the approval of the rates. It will help draw a big crowd to the picnic.

Illinois Miners to Resume Work.

The miners who have been on strike since May 25th have offered to resume work on condition that the gross-weight system of weighing coal be adopted with semi-monthly payments. The adoption of this system of weighing removes the cause of the strike. The approval of the proposition will result in a resumption of coal mining.

Trouble Among Women

Mrs. Emma Watkins complained that Mollie Owens used toward her profane, abusive and unseemly language. The city attorney on the complaint issued a warrant for the arrest of Mrs. Owens. Officer Leach served the warrant. The case will be heard today by Justice Hamner.

Rob Ferguson.

Received \$75 yesterday for a member of his Accident company who resides in Macon. He will be in Decatur over Sunday and ordered the U. S. M. Accident Association to forward his claim to the Decatur agent of the company. Bob will see that he gets his draft O. K.

Evening Practice

The Arion quartet, assisted by several young ladies, will give what promises to be a unique and interesting service at the opera house on Sunday evening. It will be in the nature of "An evening with old hymns and hymn writers."

A Warrensburg Residence.

R. J. Roberts will send a car load of tools and machinery to Warrensburg today. Monday he will go there and move a house. Mr. Roberts, who is preparing to erect a new residence to cost about \$5,000.

After a Price.

The J. L. Crane camp drill corps, Sons of Veterans, are drilling slightly on the streets, as they expect to contest in the prize drill at the state encampment Sons of Veterans, to be held in Decatur July 23 and 24.

New Bottling Works.

A couple of wealthy gentlemen from St. Louis were in the city yesterday looking over Decatur with a view to starting a large bottling works.

THE CHINCH BUGS

State Entomologist Forbes is Paving the Way for their Annihilation

Prof. S. A. Forbes, state entomologist, and his assistant, Prof. Martin, are making a number of experiments on chinch bugs and fungi, destructive of various insects, and especially chinch bugs. They have at last found a spore which, upon touching the body of an insect, kills it in a few hours. The spore is called "Trichogramma" and it is a very small, round, white, fluffy thing, like a tiny ball of cotton. It is so small that it can be blown about by the wind, and it is so light that it can be carried on a small scale, and put into the culture fluid. The spore is so small that it can be blown about by the wind, and it is so light that it can be carried on a small scale, and put into the culture fluid. The spore is so small that it can be blown about by the wind, and it is so light that it can be carried on a small scale, and put into the culture fluid.

The fungus is now ready to begin its work, and it is fatal to over fifteen different varieties of insects and worms. A week ago yesterday, fifty-three chinch bugs were taken from the university farm and infected. Now they are all dead. So far the artificial cultivation of the trichogramma has been carried on only on a small scale, and it is not yet possible to produce it in large quantities. For example, he thinks it easily possible to prepare culture fluid of the consistency of a thick cream, put this in a jar, shake it about so as to mix the spores with the cream, and put in the spores, cover it closely and thus have an immensely enlarged surface for them to multiply upon. I live chinch bugs could be infected from this fluid and be put into the culture fluid. The spore is so small that it can be blown about by the wind, and it is so light that it can be carried on a small scale, and put into the culture fluid. The spore is so small that it can be blown about by the wind, and it is so light that it can be carried on a small scale, and put into the culture fluid.

Prof. Forbes is cultivating the trichogramma in small vials with a small portion of a culture fluid in the bottom. This culture fluid is made by mixing cornmeal and beef tea to the consistency of a thin batter. A few fungi, nearly or quite invisible to the naked eye, are obtained from an infected insect and put into the culture fluid. The vials are lightly corked with soft cotton to exclude any different spores which might get in, and in the experiment, and the growth goes on at a great rapidity, multiplying by millions till the whole surface is covered with them, presenting the appearance of having been sprinkled with flour.

I live chinch bugs could be infected from this fluid and be put into the culture fluid. The spore is so small that it can be blown about by the wind, and it is so light that it can be carried on a small scale, and put into the culture fluid. The spore is so small that it can be blown about by the wind, and it is so light that it can be carried on a small scale, and put into the culture fluid.

Prof. Forbes is cultivating the trichogramma in small vials with a small portion of a culture fluid in the bottom. This culture fluid is made by mixing cornmeal and beef tea to the consistency of a thin batter. A few fungi, nearly or quite invisible to the naked eye, are obtained from an infected insect and put into the culture fluid. The vials are lightly corked with soft cotton to exclude any different spores which might get in, and in the experiment, and the growth goes on at a great rapidity, multiplying by millions till the whole surface is covered with them, presenting the appearance of having been sprinkled with flour.

The fungus is now ready to begin its work, and it is fatal to over fifteen different varieties of insects and worms. A week ago yesterday, fifty-three chinch bugs were taken from the university farm and infected. Now they are all dead. So far the artificial cultivation of the trichogramma has been carried on only on a small scale, and it is not yet possible to produce it in large quantities. For example, he thinks it easily possible to prepare culture fluid of the consistency of a thick cream, put this in a jar, shake it about so as to mix the spores with the cream, and put in the spores, cover it closely and thus have an immensely enlarged surface for them to multiply upon. I live chinch bugs could be infected from this fluid and be put into the culture fluid.
